

## New Direct Flow Aquapod 350 RO System

This system has been specifically designed for the low volume requirement in the Home and Office..

Aquapod RO unit is compact in size.  
Tank size can be 10L or 20L.

This is a low cost and low maintenance Reverse Osmosis system.

The AquaPod RO consists of a single Sediment, Nano Silver & Carbon combination prefilter, membrane and a high alkaline remineraliser filter.

The system has no requirement for electrical connections.

The Aquapod RO unit is very user friendly and easy to use. The water filter and the osmosis membrane are located internally and are easy to replace. No Technician required.

Remember to replace the filter every 6-12 months and the membrane every 2-3 years.

The Aquapod RO unit includes Australian plumbing compliant brass hardware.
